

MARINA YACHTING

The Hydra's woman shoe

After the successful launch of the *Man Hydra* shoe, Marina Yachting presents the *Woman Hydra* shoe in the Spring/Summer 2009 for the first time.

Hydra arises from cutting-edge technologies, very high-quality materials and the accurate research for structural and stylistic simplicity. A style which derives from and enhances the strong and unmistakable identity of the brand whose prerogative is to create a timeless aestheticism.

The *Woman Hydra* shoe has been created with a tapered, womanly graceful line, fastened with two metal eyelets.

It is presented in rich tumbled calf in the blue and white versions, and in suede with a particular water-proof treatment in the natural beige version..

Just like *Man Hydra*, *Woman Hydra* has revolutionized the concept of shoe, making the footbed its point of strength.: a plantar made of cutting-edge and waterproof materials, studied and patented so as to allow a total perspiration through micro-perforation.

In the new model its pull out, washable, interchangeable footbed has become lighter, improving its shock absorption capacity.

Its sole, reproducing the spinnaker-logo, is made of natural rubber and self-draining micro-splits alternated with latex and has extraordinary anti-slip properties.

Great attention is paid to details such as the supporting suede back inserts and on the instep. Its hand-sewn vamp is made of natural leather with anti salinity treatment

Hydra is a shoe which is faithful to the original style of Marina Yachting and marks the beginning of a new age.
